

**The University of Hong Kong
Faculty of Education**

**Master of Science
In Library and Information Management (MSc(LIM))**

Programme learning outcomes

1. Enhance information resources management in libraries and other organisations by applying LIM and related methodologies and techniques
2. Enhance information based services by understanding the ways that humans conceptualise, seek, and use information
3. Design systems and policies that facilitate information resource management and services within, and between, organisations and their stakeholders.
4. Design systems and policies that facilitate knowledge management in organisations and communities
5. Design policies and systems that facilitate the delivery of collections, information services and resources to an identified clientele and other internal and external stakeholders
6. Research on the acquisition, organization, storage, sharing, and use of information and/or knowledge
