12:45 – 14:00
Room 205, Runme Shaw Building, HKU
(Chair: Dr Mairin Hennebry)

Abstract

The classroom continues to be a crucial site of research for second language acquisition (SLA). In particular, close in-depth analyses of classroom interaction and its impact on language development has been the focus of qualitative SLA researchers who often adopt conversation analysis, case study and ethnography as their preferred methodological approach. Building on these developments and the growing interest in examining the social and contextual factors that affect language learning in both the physical and virtual language classroom, I engage in a critical discussion of classroom-based qualitative research by (1) providing an overview of the main qualitative methodologies and frameworks used in L2 classroom research, and (2) examining contemporary constructs and issues related to qualitative research carried out in classroom settings.

I will first present several common qualitative methodologies such as case studies classroom ethnography, and conversation analysis that have been applied to L2 classroom research. In addition to some of these most widely used methodologies, we describe some other common and significant qualitative methods (e.g., interviews, focus groups, observations) that are employed in conjunction with these methodologies. Next, we explore SLA theories (e.g., sociocultural theory, language socialization), discourse analytic approaches (e.g., Conversation Analysis, Critical Discourse Analysis), and discourse analytic tools (e.g., CAQDAS, NVivo) that are generally adopted by classroom-based researchers. These methodologies and methods will be discussed in relation to contemporary phenomena such as translanguaging, world Englishes, and neoliberalism that characterize L2 classrooms today.

I will also discuss some key issues surrounding qualitative research. These issues include the notion of research quality (Mahboob et al., 2016) and researcher reflexivity in terms of researcher assumptions and biases in relation to classroom based research. In our discussion of qualitative classroom research, and the core issues surrounding it, we also focus on contemporary SLA constructs such as emotions, language ideologies, and identity in order to create a holistic understanding of the dynamics surrounding language acquisition.

About the speaker:

Peter De Costa (PhD) is an Associate Professor in the Department of Linguistics and Languages and the Department of Teacher Education at Michigan State University. His primary areas of research are identity and ideology in SLA. He is the author of The Power of Identity and Ideology in Language Learning (Springer, 2016). He also recently edited Ethics in Applied Linguistics Research (Routledge, 2016). His work has appeared in AILA Review, Applied Linguistics Review, International Journal of Applied Linguistics, Language Learning, Language Policy, Language Teaching, Linguistics and Education, Research in the Teaching of English, System, TESOL Quarterly, and The Modern Language Journal. He recently guest edited special journal issues on scalar approaches to language learning and teaching (Linguistics and Education, 2016; with Suresh Canagarajah), teacher identity (The Modern Language Journal, 2017; with Bonny Norton), study abroad research methodologies (System, 2017; with Hima Rawal and Irina Zaykovskaya), and World Englishes and Second Language Acquisition (World Englishes, 2018; with Kingsley Bolton). He is the co-editor of TESOL Quarterly.
